
CSE6624

Introduction to Web Programming (CityU)

Student pack: Attestations, SIS and TSIS

Autumn semester 2026-2027 · Year 1 · Language of instruction: English

Instructor: Temirlan Shoiynbek (Shoiynbek T.A.), Senior Lecturer

Contact: shoinbektima@gmail.com

Stack: HTML5, CSS (Flexbox/Grid), Bootstrap, vanilla JavaScript, DOM

Not in this course: React, Node.js, databases

Chill classroom rule

No live-coding stress contests. AI tools are allowed IF you can explain your code and slightly modify it on request. Identical structure/CSS/JS to a peer = deductions. Your niche + seed + screenshots + oral defence make your work uniquely yours.

This booklet covers only SIS (6), TSIS (6), Attestation 1 (9) and Attestation 2 (9). Practice 14 and Lab 14 are graded in the weekly journal (not regraded here). The final exam project (40) is a separate brief.

1. How to use this booklet

Read the scoring table and anti-copy rules first. Then work week by week: TSIS on weeks 2, 5, 8, 11; SIS on weeks 3, 6, 10, 13. Attestation 1 is around week 8; Attestation 2 around week 15. Keep one GitHub repository for the whole semester.

- Compute your **personal seed** and claim one **niche** (Section 4).
- Create a private or public GitHub repo. README must include full name, student ID, niche, and seed colors.
- Each SIS/Attestation deliverable needs screenshots of **VS Code** and **browser DevTools** with your watermark visible.
- Submit as announced by the instructor (GitHub link + zip + LMS upload when required).
- Be ready for a 2-minute oral defence (3 random questions from the bank).

RU tip / Как пользоваться

Не пытайтесь сделать всё за одну ночь. Сначала seed и niche → README → маленькие SIS задачи → Attestation 1 как мини-сайт → Attestation 2 как JS-апгрейд. Скриншоты обязательны.

2. How scoring works (this pack)

Component	Points	Notes
Activeness in lectures	2 total	Noted in class; not the focus of this PDF
TSIS (with teacher)	$4 \times 1.5 = 6$	Weeks 2, 5, 8, 11
SIS (independent)	$4 \times 1.5 = 6$	Weeks 3, 6, 10, 13
Practice tasks	14	Weekly journal; not regraded here
Laboratory tasks	14	Weekly journal; not regraded here
Attestation 1	9	Around week 8 (midterm mini-project)
Attestation 2	9	Around week 15 (JS-heavy upgrade)
Final exam project	40	OUT OF SCOPE here (separate project brief)

Late policy (spirit of the syllabus): work submitted after the announced deadline without a documented excuse loses **10%** of that item's points. More than one week late may receive zero for that item (instructor decision).

AI policy: ChatGPT / Copilot / similar tools are allowed as helpers. You must understand every line you submit. During defence you may be asked to change a color, rename a function, or fix a small bug live. If you cannot explain or modify, the grade for that item drops.

3. Anti-copy rules (critical)

Temirlan's goal is simple: every student produces **visibly different** work. The mechanisms below are mandatory for SIS and both Attestations.

- **(a) Personal seed** from student ID last 2 digits / birth month / first letter of surname (see Section 4). Seed colors must appear in CSS variables or theme.
- **(b) Unique niche** from the list (one niche per student; assigned by formula or first-come in group).
- **(c) Screenshots:** VS Code with your file open + browser DevTools (Elements or Console) showing the watermark string or your name in a comment / visible UI.
- **(d) Oral defence:** 3 random questions from the bank; about 2 minutes.
- **(e) GitHub README** with full name + student ID + niche + seed values + short description.
- **(f) Rubric deductions** for identical HTML structure, CSS class names, or JS logic to a peer (even if niche text differs).

Warning

Copy-paste from a classmate or from last year's project without deep rewrite = fail for that component. Sharing your zip as a 'template' for friends also harms you: identical structure is detectable.

4. Personal seed, niches, and how to submit

Your personal seed (anti-copy)

Every student must compute a **personal seed** and show it in the README, page footer, and at least one visible UI watermark. Work that ignores the seed or copies a peer's structure will lose points.

Seed formula. Let **ID2** = last 2 digits of your student ID (00-99). Let **M** = birth month (1-12). Let **L** = first letter of your surname (A=1 ... Z=26; treat non-Latin surnames by Latin transliteration).

1. Hue = $(ID2 \times 7 + M \times 13) \bmod 360 \rightarrow$ this is your HSL hue for a primary color.

2. Accent = $(Hue + 40 + L) \bmod 360$.

3. Niche index = $(ID2 + M + L) \bmod 24 \rightarrow$ pick niche number = index + 1 from the list below (if already taken in your group, take the next free niche and note it in README).

4. Watermark string (exact format): CSE6624 | FULL_NAME | STUDENT_ID | niche-N

RU tip / Подсказка

Посчитайте seed один раз и запишите в README. Цвета: primary = hsl(Hue, 65%, 40%), accent = hsl(Accent, 70%, 45%). Watermark должен быть виден на скриншотах VS Code и DevTools.

Niche list (one per student)

Niches A	Niches B
1. Specialty coffee cafe in Almaty	13. Mental-health peer support club
2. Student fitness / gym club	14. Campus book swap
3. Pet shelter & adoption	15. Electric scooter rental
4. Esports university team	16. Traditional crafts marketplace
5. Hiking & weekend travel blog (Almaty region)	17. Campus food waste reduction project
6. Campus language exchange club	18. Amateur astronomy club
7. Board-game cafe	19. Volunteer blood-donor drive
8. Sustainable fashion thrift shop	20. Mobile repair workshop
9. Local street-food map	21. Plant nursery / balcony garden shop
10. Coding / robotics school for kids	22. Film club & short-movie nights
11. Indie music venue	23. Chess club with online ladder
12. Photography portfolio studio	24. Homemade bakery brand

How to submit

1. Push to your GitHub repository (private is OK if you invite the instructor; public is fine).
2. Tag or branch name suggestion: sis-week3, attestation-1, etc.
3. Export a zip of the project folder (no node_modules; this course has none).
4. Upload / send the GitHub link + zip **as announced by the instructor** (LMS / email / form).
5. Keep screenshot folder: /screenshots/ with clear filenames.

Contact for questions: shoinbektima@gmail.com. Put course code and your group in the subject line.

Semester map (this pack only)

Use this as a planning board. Exact class dates follow the university calendar; week numbers match the syllabus assessment table.

Week	This pack	Suggested focus
1	Activeness note	Setup VS Code, Git, folder
2	TSIS-1 (1.5)	Repo + first HTML page
3	SIS-1 (1.5)	Digital business card
4	Practice/Lab journal	Keep going; not regraded here
5	TSIS-2 (1.5)	Flexbox/Grid layout check
6	SIS-2 (1.5)	CSS art from seed colors
7	Build toward Att1	Sections + form draft
8	TSIS-3 + Attestation 1 (9)	Midterm mini-site due
9	Practice/Lab journal	Start JS practice
10	SIS-3 (1.5)	Niche quiz / mini-game
11	TSIS-4 (1.5)	JS DOM feature demo
12	Bootstrap + localStorage	Att2 direction
13	SIS-4 (1.5)	Accessibility fix
14	Practice/Lab journal	Polish Att2
15	Attestation 2 (9)	JS-heavy upgrade due
Exam period	Exam project (40)	Separate brief (out of scope)

RU tip / Планирование

Отметьте дедлайны в телефоне. TSIS нельзя 'сдать файлом вместо себя' без договорённости: нужен короткий контакт с преподавателем.

Worked example: computing a seed

Fake student: **Aigerim Saduakas**, ID ending **47**, born in **March (M=3)**, surname letter **S → 19**.

1. Hue = $(47 \times 7 + 3 \times 13) \bmod 360 = (329 + 39) \bmod 360 = 8$

2. Accent = $(8 + 40 + 19) \bmod 360 = 67$

3. Niche index = $(47 + 3 + 19) \bmod 24 = 69 \bmod 24 = 21 \rightarrow$ niche **22. Film club & short-movie nights**

4. Watermark: CSE6624 | Aigerim Saduakas | 20XXXXXX47 | niche-22

5. CSS: --primary: hsl(8, 65%, 40%); --accent: hsl(67, 70%, 45%);

```
:root {
  --primary: hsl(8, 65%, 40%);
  --accent: hsl(67, 70%, 45%);
  --bg: #fff8f5;
}
footer.watermark {
  font-size: 0.75rem;
  opacity: 0.85;
}
```

Do this on page 1 of your README

Paste your calculated Hue, Accent, niche number, and watermark. If numbers look wrong, show your arithmetic.

README template and screenshot protocol

Copy this skeleton into README.md and fill the brackets. English is fine; Russian notes optional.

```
# CSE6624 - [Full Name] - [Student ID]
Niche: [#] [name]
Seed: Hue=[..], Accent=[..]
Watermark: CSE6624 | [Full Name] | [ID] | niche-[#]

## How to open
Open index.html in a browser (Live Server recommended).

## Deliverables in this repo
- sis-week3/ ...
- attestation-1/ ...

## Screenshots
See /screenshots (VS Code + DevTools).
```

Screenshot protocol (required evidence)

1. In the editor: open your main file; zoom so your name in a comment OR the watermark string in code is readable.
2. Capture the whole window (OS screenshot).
3. In the browser: open DevTools (F12). Elements tab with the watermark node selected, OR Console with a console.log of your watermark, OR Network tab for Att2 API calls.
4. Save as screenshots/sis1-vscode.png and screenshots/sis1-devtools.png (rename per task).
5. Blur unrelated private browser tabs if needed; do not blur your name/ID/watermark.

RU tip / Скриншоты

Если watermark мелко, увеличьте страницу (Ctrl/+). Преподаватель должен прочитать строку без лупы.

Suggested folder structure

```
cse6624-[surname]/
  README.md
  screenshots/
  sis-week3-business-card/
    index.html  styles.css
  sis-week6-css-art/
  sis-week10-quiz/
  sis-week13-ally/
  attestation-1/
    index.html  css/  js/  images/
  attestation-2/
    index.html  css/  js/
```

You may keep one evolving site folder instead of many; then use git tags (sis-week3, attestation-1).

Part A - SIS (Student Independent Study)

4 tasks × 1.5 points = 6 points total · Weeks 3, 6, 10, 13 · ~1-2 hours each

SIS is work you do mostly on your own, then submit. Each task must use your niche and seed. Include README note + screenshots for every SIS.

SIS-1 · Week 3 · Digital business card (1.5 pts)

Build a single-page **digital business card** for a **fictional brand** inside your niche (example: barista card for your cafe, coach card for your gym). Pure HTML + CSS. No JS required.

Requirements

- Semantic tags: header, main, footer, at least one section.
- Your seed primary/accent colors as CSS custom properties (:root).
- Photo or logo placeholder with meaningful alt text.
- Contact block: email, phone (fake OK), niche city (Almaty or your choice).
- Visible watermark in footer (exact string from Section 4).
- Screenshot: VS Code + browser with DevTools open.

RU tip

Сделайте карточку похожей на визитку: имя бренда, слоган, 3 факта, кнопка-ссылка mailto. Проверьте, что цвета реально из вашего seed, а не 'просто синий'.

Rubric (1.5)

Criterion	Pts
Valid structure + semantic HTML	0.4
Seed colors + watermark present	0.4
Visual polish (spacing, typography, alt text)	0.4
Screenshots + README (name, ID, niche)	0.3

SIS-2 · Week 6 · CSS art from seed colors (1.5 pts)

Create a small **CSS art** scene (no image files for the art itself) using only HTML elements + CSS. Theme must relate to your niche (cup for cafe, paw for shelter, controller for esports, etc.). Use Flexbox or Grid for layout around the art.

- At least 5 positioned/shaped elements (divs/spans) forming a recognizable figure.
- Only your seed palette (primary, accent, plus tints/shades).
- Short caption explaining what the art represents for your niche.
- Page title and watermark include your name/ID.
- Optional: soft hover animation (transform or opacity).

Rubric (1.5)

Criterion	Pts
Recognizable niche-themed CSS art	0.5
Seed palette only + Flexbox/Grid layout	0.4
Caption, watermark, screenshots, README	0.6

SIS-3 · Week 10 · Interactive niche quiz or mini-game (1.5 pts)

Build a tiny interactive page with **vanilla JS + DOM**: either a 5-question quiz about YOUR niche facts, or a simple mini-game (click counter, memory 2×2, guess-the-number with niche flavor text).

- At least 3 DOM updates after user actions (text, classList, createElement, etc.).
- Score or progress shown on screen.
- Reset / play again button.
- No libraries. No React.
- Watermark + screenshots of code and running page.

RU tip

Начните с массива вопросов в JS, рисуйте один вопрос, по клику переходите к следующему. Не копируйте чужой quiz один-в-один: вопросы должны быть про ваш niche.

Rubric (1.5)

Criterion	Pts
Working interactivity (quiz or mini-game)	0.6
Niche-specific content + clear UI feedback	0.4
Code clarity + anti-copy evidence (screens/README)	0.5

SIS-4 · Week 13 · Accessibility fix + ID watermark (1.5 pts)

You receive (or recreate) a **deliberately broken** mini-page: missing alt, poor contrast, click-only controls, no labels on inputs, heading chaos. Fix it for accessibility, and inject your watermark / student ID into a visible skip-link target or footer banner.

- Fix: alt texts, label/input pairing, focus styles, contrast (seed colors adjusted if needed), heading order.
- Keyboard: can Tab to all interactive elements; Enter/Space activates buttons.
- Add a short 'Accessibility notes' list in the page: what you fixed (3+ items).
- Before/after screenshots encouraged.

Starter idea for the broken page (you may rewrite)

A niche contact form with unlabeled fields, a decorative image without alt, light-gray text on white, and a div that looks like a button but is not focusable. Repair it properly.

Rubric (1.5)

Criterion	Pts
Meaningful a11y fixes (3+ issues)	0.6
Keyboard usability + notes list	0.4
Watermark/ID + screenshots + README	0.5

Part B - TSIS (with teacher guidance)

4 checks × 1.5 points = 6 points total · Weeks 2, 5, 8, 11 · Short in-class / screen-share demos

TSIS is a quick check with the instructor: show progress, answer 2 questions, demo 1 feature. No need for a perfect product. Bring your laptop or share screen. Duration: about 5-8 minutes.

Chill note

You will not be grilled with live-coding puzzles. If something is half-done, say what you plan next. Honesty + visible progress beats a copied perfect page.

TSIS-1 · Week 2 · Setup & first page (1.5)

Demo: Show VS Code project folder, index.html opened in browser, GitHub repo created, README with name/ID/niche draft.

Sample questions (instructor picks 2):

- What is the difference between `<div>` and `<section>`?
- Where will your watermark live?
- What is your niche and seed hue?

Rubric (1.5): progress shown 0.5 · answers 0.5 · demo feature 0.5

TSIS-2 · Week 5 · CSS layout check (1.5)

Demo: Demo a Flexbox or Grid layout related to your niche (nav + hero + 3 cards). Show DevTools box model once.

Sample questions (instructor picks 2):

- When would you choose Grid over Flexbox?
- How did seed colors enter your CSS?
- What breaks on a narrow phone width right now?

Rubric (1.5): progress shown 0.5 · answers 0.5 · demo feature 0.5

TSIS-3 · Week 8 · Attestation 1 progress (1.5)

Demo: Show Attestation 1 site structure: at least 3 sections navigable, form started, mobile breakpoint attempt.

Sample questions (instructor picks 2):

- Which semantic tags did you use and why?
- How does your form validate empty fields (HTML or JS)?
- What will you finish before the Attestation 1 deadline?

Rubric (1.5): progress shown 0.5 · answers 0.5 · demo feature 0.5

TSIS-4 · Week 11 · JS DOM progress (1.5)

Demo: Demo one working JS feature (nav toggle, filter, or localStorage draft) for Attestation 2 direction.

Sample questions (instructor picks 2):

- Which DOM method did you use to update the page?
- What happens if localStorage is disabled?
- How is your feature different from a classmate's?

Rubric (1.5): progress shown 0.5 · answers 0.5 · demo feature 0.5

Common TSIS rubric detail

Band	What it looks like	Pts
Full	On time, clear demo, solid answers, seed/niche visible	1.5
Partial	Something works but weak answers or missing evidence	0.5-1.0
Minimal	No demo / cannot explain / absent without notice	0-0.5

Part C - Attestation 1 (9 points)

Midterm mini-project · around week 8 · multi-section responsive niche site

Build a small multi-section responsive website for **YOUR chosen niche**. This is a front-end only project: HTML5, CSS (Flexbox and/or Grid), a bit of vanilla JS. Bootstrap is optional for Attestation 1 (required flavor appears in Attestation 2).

Must-have requirements

- ☐ At least 4 sections (e.g. Hero, About, Services/Items, Contact) on one page or linked pages.
- ☐ Semantic HTML5 landmarks and headings in logical order.
- ☐ Flexbox **or** Grid used meaningfully (not only for a tiny icon row).
- ☐ Working contact / booking / signup **form** with labels (HTML5 validation OK).
- ☐ At least 3 images (or figure placeholders) with meaningful **alt** text.
- ☐ Mobile breakpoint (max-width around 768px or similar) that clearly changes layout.
- ☐ Small JS: mobile nav toggle **or** simple filter/tabs.
- ☐ Seed colors + watermark string visible; README with name, ID, niche, seed.
- ☐ Screenshots: VS Code + DevTools; GitHub link submitted as announced.

RU tip / С чего начать

1) Нарисуйте на бумаге 4 блока. 2) Сверстайте mobile-first. 3) Добавьте цвета из seed. 4) Форма + JS toggle. 5) Скриншоты и README. Не гонитесь за анимациями.

Rubric out of 9

Criterion	Pts	Notes
Semantic structure & content quality for niche	2.0	Real niche voice, not lorem-only
Layout: Flexbox/Grid + responsive breakpoint	2.0	Must visibly reflow on mobile
Form + images with alt	1.5	Labels linked; alts meaningful
JS feature (nav toggle or filter)	1.5	Works without console errors
Personalization (seed, watermark, README, screens)	1.0	Anti-copy evidence
Defence (3 questions, ~2 min)	1.0	Explain + tiny modify OK

Grade bands (guide)

Band	Range	Meaning
Excellent	8.0-9.0	Polished, unique, solid defence
Good	6.5-7.9	Complete with minor gaps
Passable	4.5-6.4	Core done but weak responsive/JS/personalization
Weak	0-4.4	Incomplete, copied structure, or failed defence

Defence question bank (instructor picks 3)

1. Walk me through your HTML landmarks. Why these tags?
2. Where are your seed colors defined? Change the accent slightly and reload.
3. How does your mobile breakpoint work? What exactly changes?
4. Show the form validation. What happens if email is empty?
5. Explain your JS feature in plain language. Which DOM APIs?
6. Which part would break first if images fail to load?
7. How is your layout different from a peer with another niche?
8. Point to one accessibility choice you made on purpose.
9. If you had one more hour, what would you improve?
10. Where is the watermark? Why do we require screenshots?

Part D - Attestation 2 (9 points)

JS-heavy upgrade · around week 15 · Bootstrap + DOM + localStorage (+ optional public API)

Extend Attestation 1 (preferred) or rebuild a compact version. Focus: **Bootstrap components** plus meaningful **vanilla JS DOM** features. Still no React/Node.

Must-have requirements

- ☐ Bootstrap 5 (CDN OK): navbar, cards, modal or collapse, and a responsive grid.
- ☐ Dynamic list: add / remove (or mark done) items with JS (examples: menu items, events, pets, products).
- ☐ Persist the list with **localStorage**; data survives refresh.
- ☐ At least one extra DOM UI: live search/filter, tabs, or theme toggle using seed colors.
- ☐ Optional bonus: **fetch** from a public API related to niche (weather, quotes, dog photos, etc.) and render results. If CORS/API fails, document the attempt and use a local JSON file instead.
- ☐ Keep personalization: niche, seed, watermark, README updated, new screenshots.
- ☐ Code stays understandable: short functions, comments where non-obvious.

RU tip

Схема: Bootstrap navbar + cards. Массив в JS ↔ localStorage. Кнопка Add пишет в массив и перерисовывает список. Filter просто скрывает карточки. API - бонус, не блокер.

Rubric out of 9

Criterion	Pts	Notes
Bootstrap components used correctly	2.0	Not only a CDN link
Dynamic list + localStorage	2.5	Add/remove + persist
Extra DOM feature (filter/tabs/theme)	1.5	Must be visible in demo
Code quality + niche personalization + screens	1.5	Anti-copy evidence
Optional fetch/API or solid JSON fallback	0.5	Bonus-leaning but in rubric
Defence (3 questions)	1.0	Explain + modify

Defence question bank (picks 3)

1. Show where list items are stored and restored after refresh.
2. Add a new fake item live. Where does the code path go?
3. Why Bootstrap grid here instead of only Flexbox?
4. What happens if localStorage quota is exceeded?
5. Explain event delegation vs per-button listeners (if used).
6. If fetch fails, what does your UI show?
7. Change one seed color CSS variable and show the effect.
8. Which Bootstrap component was hardest to customize?
9. How would you prepare this UI for a real backend later (CSE8603)?
10. Point to code you wrote yourself vs AI-assisted lines you understand.

Starter snippets (ideas, not copy-paste finals)

These fragments illustrate direction. Replace names and copy with your niche. Submitting these unchanged is a bad idea.

HTML watermark footer

```
<footer class="watermark">
  CSE6624 | Aigerim Saduakas | 20XXXXXX47 | niche-22
</footer>
```

JS nav toggle sketch

```
const btn = document.querySelector('.nav-toggle');
const menu = document.querySelector('.nav-links');
btn.addEventListener('click', () => {
  menu.classList.toggle('is-open');
});
```

localStorage list sketch (Att2)

```
const KEY = 'cse6624-niche22-items';
function load() {
  return JSON.parse(localStorage.getItem(KEY) || '[]');
}
function save(items) {
  localStorage.setItem(KEY, JSON.stringify(items));
}
```

RU tip

Ключ localStorage должен включать niche или ID, чтобы не пересекаться с чужими демо на одном компьютере.

Make your work look different from peers

Even with different niches, students sometimes share the same tutorial skeleton. Avoid the patterns below.

- Do not reuse the same class names like `card1` `card2` `card3` from a shared zip.
- Rename components/sections to niche words (e.g. `FilmNightHero`, `CoworkBookingForm`).
- Change layout rhythm: card count, nav labels, footer content, image subjects.
- Write your own copy (3-5 sentences per section). Translating the same English paragraph still looks cloned if structure matches.
- JS: different function names and control flow; do not paste the same quiz engine with only question text swapped.

FAQ

Q: Can I use Bootstrap in Attestation 1 (CSE6624)?

A: Yes, optional. Attestation 2 expects Bootstrap components used seriously.

Q: Can I use TypeScript / Next.js (CSE8603)?

A: Plain React + Vite is the default. Extra tools are OK only if you can defend them and keep the project runnable.

Q: Private GitHub repo?

A: Yes. Invite the instructor or send a zip that matches the repo state.

Q: Missed a TSIS week?

A: Email ASAP with reason. Makeup is not automatic; instructor decides.

Q: AI wrote half my code.

A: Allowed if you understand it. Expect a modify-request in defence.

Q: Postgres will not install.

A: CSE8603 Att2: use SQLite and say so in README. Still need a real DB file and queries.

Q: Practice points?

A: CSE6624: weekly journal. CSE8603: practice instructor. Not regraded in this booklet.

Q: Exam project?

A: Separate 40-point brief. Do not treat Att2 as the exam.

2-minute defence prep sheet

Practise aloud once. Timer on phone. Structure:

1. 20 sec: My niche is ...; my seed hue is ...; watermark is in the footer.
2. 40 sec: Demo the main happy path (form submit / add item / API create).
3. 40 sec: Open one code file and explain the key function.
4. 20 sec: Answer the instructor's modify request (color, label, tiny bug).

Chill reminder

Nervous is OK. Reading from the screen without understanding is not OK. If stuck, say what you tried; that still scores better than silence.

Mini drill ideas (pick one before Att1)

- Change accent color in `:root` and prove the UI updates.
- Add one more card to a Grid section.
- Rename a JS function and fix call sites.

Integrity & identical-work deductions

Temirlan may compare repos across the group. Typical deductions (applied on top of rubrics):

Issue	Typical impact
Same HTML/CSS skeleton as peer (diff text only)	−30% to −100% of item
Same JS functions/class names as peer tutorial zip	−20% to −50%
Missing watermark / screenshots / README identity	−0.5 to −1.5 on item
Cannot explain or modify in defence	Defence criterion → 0; item may fail

Issue	Typical impact
Copied from prior year without rewrite	Item may be zeroed

If you collaborated ethically (pair discussion), write a short note in README: who did what. Each student still needs their own niche and seed.

5. Quick checklists & reminders

Before every SIS / Attestation submit

- ☐ README has full name, student ID, niche number/name, seed Hue/Accent, watermark string.
- ☐ Watermark visible in the running page.
- ☐ screenshots/ folder: VS Code + DevTools (name or watermark readable).
- ☐ GitHub link works for the instructor.
- ☐ I can explain my code and change a small detail if asked.
- ☐ My HTML/CSS/JS is not a clone of a classmate's project.

What this PDF does NOT grade

- Weekly Practice (14) and Lab (14): graded in the weekly journal by the instructor; not regraded in this pack.
- Lecture activeness (2): separate; participate in class.
- Final exam project (40): separate brief near the end of term.

Good luck

Build something you can show your family: a tiny real site for your niche. Questions: shoinbektima@gmail.com (include CSE6624 + group). See you in defence.

© Satbayev University · CSE6624 · Instructor Temirlan Shoiynbek · Autumn 2026-2027 · For enrolled students. Not a substitute for the official syllabus.
